

WEIGHING THE RISKS

A community program that offers free health checks, education, and resources to help people with mental health conditions take care of their heart and body.

01

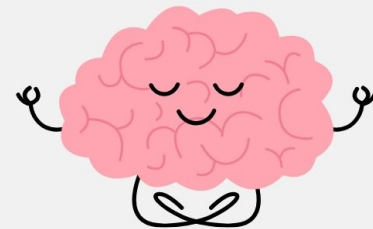

Purpose

To raise awareness about preventable health risks like heart disease, stroke, and diabetes, and support people in making healthy lifestyle changes.

02

Who is it for?

People living with serious mental illness (SMI), such as depression, bipolar disorder, or psychosis. Others are welcome as well!

03

Why It Matters

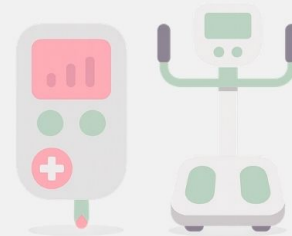

People with SMI live 10–25 years shorter than others, in part due to preventable health conditions like heart disease.

04

How it Works

We use clinic-grade devices to measure cholesterol, glucose, and body composition.

05

Join Us!

Get knowledge, support, and resources to make healthy changes *today*.

WHO WE ARE

We are the Community Intervention Program (CIP), developed by UMass Mind to address the needs of community members with serious mental illness through a wide range of programs.
